Increasing Youth Engagement Over Summer

Jimmy, Michael, Sandy

This idea all started...

What not participating does...

- Lost potential/missed opportunities to grow and experience
- Negative impact on mental health

AI/ChatGPT's Role

- research stage
- solution prototyping
- app feature

Our Secret Mismatch

- Two types of non-participating students
 - 1. Unaware of opportunities
 - 2. Unaware of how it could benefit them
- By informing students, we could increase engagement

Goal

- help students see the big picture, track their progress, and inform them
- We learned that students want to succeed but may need better tools

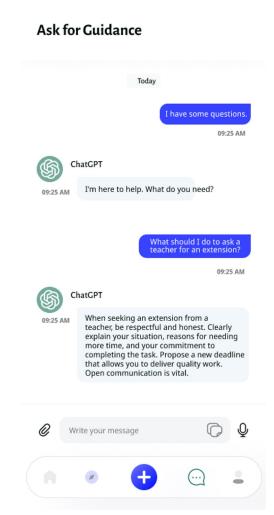

Solution Prototype

- Inspired by fitness apps apps that help people track progress towards a goal
- Instead of a target weight or habits goal, we have academic/career goals
